

AI + SOFTWARE DEV = ???

- There are open source and commercial Integrated Development Environments (IDE) today:
 - Steve Yegge is building “chat oriented programming” (CHOP) at Sourcegraph. Read [The Death of the Junior Developer](#)
- Maybe many more developers, like “no-code”?
 - Maggie Appleton presented at Local-first Conf. Read [Home-cooked Software and Barefoot Developers](#)

OPEN SOURCE IS NO LONGER A RADICAL ACT

- Running things ourselves, for small groups, for our community, for our country
- Building on protocols rather than platforms
- A Decentralized Web, Web3, Local-first software, of user agency and ability to use your data everywhere
